

Yuta Banishky

425-321-7715 | U.S. Permanent Resident | yutabanishky@gmail.com | yutabanishky.com | github.com/YutaB123 | linkedin.com/in/yutabanishky

My passion is solving real-world problems with data and AI, not just building things that work in theory, but things that actually make people's lives a little easier. Mainly working in Python, SQL, pandas, Power BI, and Tableau.

ACHIEVEMENTS

- Selected for the UW-IT Student Innovation Lab's **Spring 2026 Community Showcase** for Dubly; featured on the Lab's website and LinkedIn
- Founded two community organizations: Bellevue Coding and Wilburton Soccer
- Earned the **Microsoft Power BI Data Analyst Professional Certificate**, 2026

PROFESSIONAL EXPERIENCE

Data Analyst | Seattle University Food Bank

Jan 2026 - Present

Seattle, WA

- Analyzed 340+ weekly orders in PostgreSQL to surface demand patterns, cutting stockouts **18%** and overstock waste **12%** in one quarter
- Built a logistic regression model in Python to forecast restocking by item category; deployed it as a REST API handling ~1,000 requests/day for 200+ households weekly

Founder & Instructor | Bellevue Coding

Jan 2025 - Jun 2025

Bellevue, WA

- Founded and taught a free weekly Python program for ages 8-14 at Bellevue Library, growing enrollment **133%**
- Extended the curriculum to ML and analytics pipelines for ages 13-17

EDUCATION

University of Washington, Seattle, WA

Expected June 2029

B.S. in Informatics, Data Science Track | GPA: 3.75 | Dean's List

Relevant Coursework: Data Programming, Elements of Statistical Reasoning, Advanced Statistical Methods, Foundational Skills for Data Science

PROJECTS

Dubly | Python, FastAPI, SQLite, Next.js, Claude API, Whisper

- Built a chatbot study assistant integrating the Claude and Whisper APIs with the Canvas LMS API, generating quizzes, flashcards, and study plans from course material
- Fixed a SQLite concurrency bug across 10 data stores using per-thread connections and WAL mode, cutting error rate under load from **35% to 0%**, verified by a TDD stress suite
- Profiled per-turn cost at \$0.0475 with token-level accounting and identified prompt caching as a **74% cost reduction** (\$0.0123)

YutaChess | Node.js, WebSockets, Socket.IO, chess.js

- Built a server-authoritative multiplayer chess backend validating moves and syncing game state between players in real time
- Load-tested to **3,000 concurrent games** and 374K+ moves with zero state desynchronization and 1.89 ms p50 latency

LEADERSHIP & ACTIVITIES

Project Officer | UW Data Science Club

Sep 2025 - Present

- Led a 5-person team building a linear regression pipeline on 2,000+ cleaned HUD and Census records, finding an **R² of 0.72** between homelessness and income across greater Seattle, visualized in Tableau

Member | Machine Learning @ UW

Mar 2025 - Present

- Built a real-time sentiment pipeline for Reddit comment streams with Python and PRAW, fine-tuning DistilBERT and deploying via FastAPI on AWS EC2 with a Streamlit dashboard

TECHNICAL SKILLS

Languages: Python, SQL, JavaScript (ES6+)

Data & Analytics: pandas, Power BI, Tableau, Excel, DAX, logistic and linear regression, PostgreSQL, SQLite

Tools: FastAPI, Node.js, Next.js, React, AWS, Git, Claude API, REST APIs
