Data Science student focused on turning large public datasets into findings people can act on; seeking data analyst internships

EDUCATION

University of Washington

Expected June 2029

B.S. in Informatics, Data Science Track — GPA: 3.75

Seattle, WA

- Relevant Coursework: CSE 163 (Intermediate Data Programming), STAT 311 (Intro to Statistical Methods), INFO 201

EXPERIENCE

Volunteer Data Analyst

Jan 2026 – Present

University Food Bank

Seattle, WA

- Analyzed distribution data across 340+ weekly orders to identify demand patterns, reducing stockouts on high-turnover items by 18% and cutting overstock waste by 12% over one quarter
- Supported inventory management for a food bank serving 200+ households weekly, including students, community members, and unhoused individuals experiencing food insecurity

Project Officer

Nov 2025 – May 2026

UW Data Science Club

Seattle, WA

- Coordinated project timelines across 6 teams of 4–5 members, delivering 3 completed projects per quarter for a 50-member club
- Organized club meetings and workshops, connecting members with project opportunities and technical resources to build practical data science skills

Founder & Instructor

Jan 2025 – Jun 2025

Bellevue Coding

Bellevue, WA

- Founded and taught a free weekly Python program for children ages 8–14 at the Bellevue Library, designing all curriculum and lesson plans from scratch; grew enrollment from 3 to 7 students per session

Peer Tutor, Coding & Computer Science

Sep 2023 – Jun 2025

Bellevue High School

Bellevue, WA

- Tutored 15 students per week in intro programming and statistics, holding 6 hours of sessions weekly across 2 semesters; 80% of tutees reported improved course grades

PROJECTS

Seattle Traffic Collision Analysis | *Python, pandas, Matplotlib*

- Analyzed 221,266 records from the City of Seattle's SDOT Collisions dataset (2004–present) to identify where the city should prioritize traffic safety spending
- Answered three research questions on crash-location hotspots, street lighting effects, and time-of-day severity patterns, isolating cyclist-strike hotspots (e.g. Burke-Gilman Trail crossings) as the strongest actionable finding
- Found commute hours (5–7pm, 6–7am) had higher average crash severity than late-night hours, contrary to initial hypothesis; published on GitHub

AI CSV Data Analyzer | *Python, pandas, Gradio, OpenAI GPT-4o-mini*

- Built a tool to upload a CSV, ask questions in plain English, and receive auto-generated charts in response
- Designed a three-stage agent pipeline that keeps raw data on-device for privacy, sending only column schemas off-machine

Canvas SMS Study Assistant | *Next.js, Twilio, Claude API*

- Built an SMS study assistant that texts AI-generated flashcards and tracks Canvas deadlines, with a bring-your-own-token model to keep it free to run at scale

TECHNICAL SKILLS

Languages: Python, SQL, R, JavaScript

Data & Analysis: pandas, Matplotlib, Excel, statistical analysis, data cleaning & visualization

AI & APIs: Anthropic Claude API, OpenAI API, LLM application development

Tools: Git, GitHub, VS Code, Microsoft Azure, Next.js, Node.js

OTHER EXPERIENCE

Shift Manager

Mar 2024 – May 2025

Mochinut

Bellevue, WA

- Managed shift operations for a 5-person team serving roughly 300 customers daily; drove a 5–10% increase in shift sales through upselling and operational efficiency

Founder & Organizer

Mar 2024 – Aug 2024

Wilburton Soccer

Bellevue, WA

- Founded and operated a youth soccer training program with a paid membership model; grew participation from 2 to 8+ players per session through self-directed outreach
